Syntax

%cpaste

/ntax
Opening the Jupyter console:
ipython
Getting an overview of IPython's features:
?
Accessing Python's help system:
help()
Displaying the documentation for an object:
help(obj)
Exiting the Jupyter console:
exit
Running an external Python script:
%run test.py
Opening a file editor:
%edit
Opening an interactive debugger:
%debug
• Showing the last few commands:
%history
• Saving the last few commands:
%save
Printing all variable names:
%who
• Reseting the IPython session:
%reset
• Showing the contents of the current directory: !ls
• Executing code from the clipboard: %paste
 Opening editing area where you can paste in code from your clipboard:

Concepts

- Jupyter is an enhanced Python interpreter that makes working with data easier.
- Shells are useful for when you need to quickly test some code, explore datasets, and perform basic analysis.
- The main difference between Jupyer console and Jupyter notebook is that the console functions in interactive mode.
- Magics are special Jupyter commands that always start with %. Jupyter magics enable to you to access Jupyter-specific functionality, without Python executing your commands.
- Autocomplete makes it quicker to write code and lead to discovery of new methods. Trigger autocomplete by pressing the TAB key while typing a variable's name. Press TAB after typing variable name to show the methods.
